Abstract

Systems and methods help explain search logic and search results to a user, who performed a search. The search is part of any application, such as email, word processing, e-commerce, database queries, Internet search engines, website searches, document management. Systems and methods of displaying similarity profiles and manipulating the profile of a relevancy search help a user to understand how a search is performed and why the results are what they are. In this way, a user learns more quickly and searches more efficiently.
